Chinese Television and National Identity Construction Lauren Gorfinkel 2017-11-03 This book examines music entertainment programmes on China Central Television, China's only national level television network, as well as on nationally-available provincial channels, exploring how such programmes project a nuanced image of China's identity and position in the world. It shows how the images presented - primarily to domestic audiences - are in step with China's party-state nationalism, and at the same time flexible and open to change as China's circumstances change. The book contextualises identity construction in the media by examining the development of television in China and the political struggles between provincial and national television stations, as well as by foregrounding the historical and contemporary role of musical culture in China's nation-building project. It discusses the portrayal of the majority Han Chinese, and of ethnic minorities and their music, which, the author argues, are shown as fitting with the party-state rhetoric of "a unitary multi-ethnic state". It also outlines how the Chinese of Greater China – Hong Kong, Taiwan, Macao and the overseas Chinese – are incorporated into a mainland centred Chinese identity. In addition, it shows how the performances of foreign personalities on the Chinese television stage emphasise foreigners' attraction to China, the uniqueness of the Chinese nation and Chinese civilisation, and the revitalised role of China in the world. Overall, the book demonstrates how the variations of Chinese identity fit with prevailing political ideologies in China and with the emerging theme of a China-centred world.

Personal Data (Privacy) Law in Hong Kong A Practical Guide on Compliance (Second Edition) Mr. Stephen Kai-yi WONG The idea of a right to privacy, which arose in reaction to the rapid rise of newspapers, instant photography and the “paparazzi” of the 19th century, has evolved into a constitutional right in much of the developed world. It is enshrined in Hong Kong through Articles 28, 29, 30 and 39 of the Basic Law. Hong Kong stands proud as the first jurisdiction in Asia to enact legislation to safeguard personal data in the form of the Personal Data (Privacy) Ordinance, Cap 486 (“the Ordinance”) which came into force in 1996. At its centre are the six Data Protection Principles based on the 1980 OECD Guidelines. The office of the Privacy Commissioner for Personal Data was created under this legislation to provide oversight and ensure compliance. The Octopus scandal in mid-2010 eventually led to substantial changes being made to the Ordinance that were enacted in 2012 and 2013, the main amendments being the Direct Marketing provisions and the provision of legal assistance and representation to aggrieved persons. In this digital age, the Ordinance is proving to be the main safeguard of our privacy rights. The Data Protection Principles seek to create broad common principles based on fairness that apply to the public and private sectors. The passage of twenty years since the enactment of the Ordinance has given rise to a substantial body of case law and administrative decisions on these principles and the other provisions of the Ordinance. The new amendments have already been the subject of judicial scrutiny. This publication, which replaces its predecessor, has the dual aim of becoming a practitioner’s guide on the important subject of personal data privacy, containing, as it does, a detailed exposition of the principles and provisions in the Ordinance and a comprehensive source of reference materials, and of enabling the Privacy Commissioner to discharge his major duty to promote awareness and understanding of the Ordinance. The second edition includes not only a full discussion of these principles, but also summaries of all the seminal cases and Administrative Appeals Board rulings in this area, as well as a comprehensive list of all the pertinent cases. **Forensic Gait Analysis** Haydn D. Under Observation: The Interplay Between eHealth and Surveillance Samantha Adams 2016-12-31 The essays in this book clarify the technical, legal, ethical, and social aspects of the interaction between eHealth technologies and surveillance practices. The book starts out by presenting a theoretical framework on eHealth and surveillance, followed by an introduction to the various ideas on eHealth and surveillance explored in the subsequent chapters. Issues addressed in the chapters include privacy and data protection, social acceptance of eHealth, cost-effective and innovative healthcare, as well as the privacy aspects of employee wellness programs using eHealth, the use of mobile health app data by insurance companies, advertising industry and law enforcement, and the ethics of Big Data use in healthcare. A closing chapter draws on the previous content to explore the notion that people are 'under observation', bringing together two hitherto unrelated streams of scholarship interested in observation: eHealth and surveillance studies. In short, the book represents a first essential step towards cross-fertilization and offers new insights into the legal, ethical and social significance of being 'under observation'.
