Historical Methods in Mass Communication James D. Startt 2003 Handbook of the research methods used to study the history of mass communication. Engaging Undergraduates in Publishable Research: Best Practices Traci A. Giuliano 2019-11-20 Although many articles and books have been written about conducting research with undergraduates, there is a dearth of research on the process of publishing with undergraduates. Thus, in this research topic, we assembled a collection of 43 articles from 98 researchers worldwide who are passionate about—and have had success in—publishing high quality peer-reviewed journal articles with undergraduates. The diverse articles represent a wide range of practices to help researchers publish with undergraduates, including structuring the curriculum to promote undergraduate research and publication, optimizing research experiences for undergraduates, training students in implementing advanced techniques, accessing special populations, or conducting research in off-campus settings, addressing institutional and career challenges for faculty, and increasing inclusion and diversity. Each article provides a unique and diverse perspective that nevertheless resonates across contexts and situations. We hope that the ideas, models, techniques, and practices in these articles will motivate and inspire readers to begin, continue, or rethink how they engage undergraduates in publishable research; we also hope to stimulate empirical and quantitative research on the effectiveness of these ideas, models, techniques, and practices.

Participatory Activist Research in the Globalised World lisahunter 2012-12-05 Action research was conceived as a method of collaborative, self-reflective problem-solving in a community context. Yet many believe it has evolved too far away from its original, directly activist roots. As a direct response to calls for a rejuvenation of the social agenda of ‘action research’, this volume provides an all-inclusive road map to generating and implementing politically active grass-roots research activities. It is a priceless practical guide for the newly minted researcher wanting to make a tangible difference in their profession and in the world. Where some action research models have been criticized for losing focus on the participatory and social justice roots of this type of research, this book puts social justice activism squarely center stage, guiding the researcher through the theoretical, methodological and practical considerations and constraints of developing, implementing and sustaining research in the cultural professions. Lcating and contextualizing the history and theory of action research, critical theory and other related methodologies and concepts, this volume takes the reader on a journey that begins with the formation of a question, puzzle or research idea right through to the publication of a report on your finished project. Including discrete sections on every stage in the process, from generating a social justice activism agenda, through forming a team and empowering participants, to ensuring the implementation of your agenda and publishing and disseminating your work. Engaging their readers with a fresh acronym, PATr—Participatory Activist Research—the authors give fresh impetus to those looking for a systematic way to understand and shape practice in their daily work, their profession and their world.
